Energy Insights Online

Savvy energy managers know that managing the "how" and "when" of electricity consumption can return huge savings. But up until now, acquiring specific measures of energy consumption meant significant investments in hardware and software. Not any more!

Energy Insights Online monitors your electricity consumption via special recording meters and converts this data into simple, easy-to-understand usage graphs and reports that you can access anywhere via the Internet.

Energy Insights Online gives you the power to:

- Develop more effective incentive-earning electricity curtailment strategies.
- Produce half-hourly, daily or monthly energy usage reports.
- Compare energy usage amounts against previous periods -- or other enrolled accounts.
- Examine energy usage trends.
- Validate machine or process efficiency upgrades.
- Establish relationships between electricity usage and outside temperature.
- Improve "cost-based accounting" procedures.
- Devise "load-shifting" strategies to lower monthly demand charges.
- And more!

For More Information

Call your ComEd Account Manager or send an email to EnergyInsightsOnline@comed.com.

Try the demo OR enroll today!

Would you like to try a demo? Email us and we'll send you a free user I.D. and password. Or enroll today and we'll send you your own user ID and password, and you can begin saving money.

Schedule a Site Visit

In order for us to create an accurate model of your building, we will need to do a building audit. Audits will take between two and four hours and require the presence of your Building Engineer.

Complete the Pre-Audit Worksheet

Some of the information that our team needs to model your building can be provided by your Building Engineer prior to our site visit. A copy of the Pre-Audit Worksheet is enclosed.
